

Switching family by size beats either family alone over a wide band of cutoffs, on either statistic

(a) ratio of means: total error over total truth; shaded: 40 to 170 EPDs

(b) median of per-case ratios: the typical case; shaded: 20 to 200 EPDs

* needs market shares, which are not published: the blue curves and the starred lines are a ceiling, not choices
