The size rule has the lowest error a practitioner can get on 7 of 15 claims

lowest a practitioner can get | tied with it | lowest of all seven | tied with it

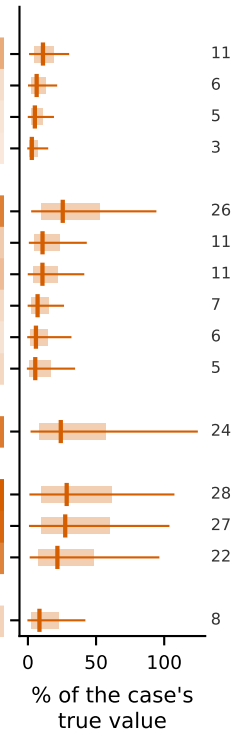
tied: the 95% interval of the paired difference reaches zero

(a) Error of each option

options a practitioner can apply | **options that require market shares**

	KDE uniform	Log-normal uniform	Normal uniform	size rule (uniform)	KDE market	Log-normal market	Normal market
what is the building total?							
the total: its standard deviation	17.7	21.8	29.3	17.1	16.8	22.8	29.9
the total: its mean	7.0	6.9	11.2	6.8	6.4	5.8	11.5
the total: its 90th percentile	9.3	9.1	9.9	8.7	7.6	7.7	9.2
the chance of meeting a budget	5.1	4.9	8.2	4.4	4.4	4.3	8.1
which material is biggest, and how often?							
a material: its chance of being largest	25.6	25.8	42.2	26.0	23.0	24.3	45.2
a material: its share at the building 95th	20.6	19.9	20.5	19.2	18.0	17.4	18.3
a material: its standard deviation	18.4	20.4	23.5	18.8	14.2	19.3	23.2
a material: its share of the total	9.1	9.0	12.8	9.1	7.8	7.5	12.9
a material: its 95th percentile	12.0	12.5	12.6	11.7	8.3	9.3	9.9
a material: its mean contribution	8.4	8.3	13.8	8.4	5.3	4.7	13.6
which material drives the uncertainty?							
the uncertainty index	44.3	46.1	47.3	43.6	41.8	45.6	46.7
how effective is a reduction strategy?							
a cap: its chance of saving 5%	25.1	27.2	55.3	25.4	16.5	23.5	57.2
a cap: how often it binds	22.8	24.7	51.4	23.3	14.7	21.1	54.1
a cap: its mean saving	28.1	29.9	43.4	28.6	18.2	23.7	43.8
is this design better than that one?							
the probability B beats A	9.5	9.4	15.4	9.5	7.2	8.0	15.4

(b) Change per case



(c) The lowest error changes with dataset size
	KDE uniform	Log-normal uniform	Normal uniform	KDE market	Log-normal market	Normal market
3-9 EPDs	32.6	33.0	35.4	36.3	39.1	39.2
10-99 EPDs	22.0	21.4	25.2	22.2	22.1	26.0
100-999 EPDs	15.2	15.7	20.7	12.2	12.7	19.1
1,000+ EPDs	14.2	15.3	20.2	9.3	11.1	19.2
